

WMF Perfection Hygiene: TÜV certified !

Perfect coffee pleasure and the highest standards of hygiene are the key focus for WMF Perfection fully automatic coffee machines.

After extensive tests, the WMF Perfection 600 series of fully automatic coffee machines were certified as microbiologically harmless by the independent certification institute TÜV Rheinland.

The certificate underlines the high standards that the WMF product design meets in terms of excellent hygiene with the highest quality of coffee and milk drinks.

It is also guaranteed by the excellent hygiene in the processing of coffee, milk and water. In addition, cleaning the machines is very easy, efficient and convenient.

In order to receive the TÜV Rheinland hygiene certificate, three components are required:

- 1) The review of the hygienic design
- 2) The microbiological tests on the fully automatic coffee machine
- 3) The microbiological long-term investigations

The WMF Perfection 600 series fully automatic coffee machines have successfully passed all of these detailed tests and have been awarded the TÜV Rheinland hygiene certificate.

Perfect hygiene through patented WMF technologies

The WMF Perfection fully automatic coffee machines have patented technologies for automatic self-cleaning of the brewing unit and the milk system. The automatic hydraulic-mechanical processes and the use of hot water over 80 °C and additional steam ensure an excellent level of comfort and cleanliness.

The cleaning programs are also perfectly matched to the WMF Perfection cleaning agents, such as the WMF Perfection descaler and the WMF Perfection cleaning tablets.
